Consolidated Interim Financial Statements of

MAXIM POWER CORP.

for the First Quarter Ended March 31, 2015
(unaudited)

FORM 52-109F2
CERTIFICATION OF INTERIM FILINGS
FULL CERTIFICATE

I, John R. Bobenic, President and Chief Executive Officer of Maxim Power Corp., certify the following:

1. ***Review:*** I have reviewed the interim financial report and interim MD&A (together, the "interim filings") of Maxim Power Corp. (the "issuer") for the interim period ended March 31, 2015.

2. ***No misrepresentations:*** Based on my knowledge, having exercised reasonable diligence, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings.

3. ***Fair presentation:*** Based on my knowledge, having exercised reasonable diligence, the interim financial report together with the other financial information included in the interim filings fairly present in all material respects the financial condition, financial performance and cash flows of the issuer, as of the date of and for the periods presented in the interim filings.

4. ***Responsibility:*** The issuer's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (DC&P) and internal control over financial reporting (ICFR), as those terms are defined in National Instrument 52-109 Certification of Disclosure in Issuers' Annual and Interim Filings, for the issuer.

5. ***Design:*** Subject to the limitations, if any, described in paragraphs 5.2 and 5.3, the issuer's other certifying officer(s) and I have, as at the end of the period covered by the interim filings

   (a) designed DC&P, or caused it to be designed under our supervision, to provide reasonable assurance that

      (i) material information relating to the issuer is made known to us by others, particularly during the period in which the interim filings are being prepared; and

      (ii) information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation; and

   (b) designed ICFR, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP.

5.1 ***Control framework:*** The control framework the issuer's other certifying officer(s) and I used to design the issuer's ICFR is the Internal Control - Integrated Framework (1992) published by the Committee of Sponsoring Organizations.

5.2 ***ICFR – material weakness relating to design***: The issuer has disclosed in its interim MD&A for each material weakness relating to design existing at the end of the interim period

(a) a description of the material weakness;

(b) the impact of the material weakness on the issuer's financial reporting and its ICFR; and

(c) the issuer's current plans, if any, or any actions already undertaken, for remediating the material weakness.

5.3 N/A

6. ***Reporting changes in ICFR:*** The issuer has disclosed in its interim MD&A any change in the issuer's ICFR that occurred during the period beginning on January 1, 2015 and ended on March 31, 2015, that has materially affected, or is reasonably likely to materially affect, the issuer's ICFR.

Date: May 5, 2015

The accompanying notes are an integral part of these condensed consolidated interim financial statements.

1. Reporting entity

Maxim Power Corp. is incorporated in the province of Alberta, Canada. Maxim Power Corp. and its subsidiaries (together "MAXIM" or the "Corporation") is an independent power producer, which acquires or develops, owns and operates power and power related projects. The Corporation has power generation facilities in Alberta, the United States of America (“United States”) and France. The Corporation’s common shares trade on the Toronto Stock Exchange under the symbol "MXG". MAXIM’s registered office is Suite 1210, 715 – 5 Avenue S.W., Calgary, Alberta, Canada, T2P 2X6.

2. Basis of preparation and statement of compliance

(a) Going concern

These condensed consolidated interim financial statements have been prepared on a going concern basis, which presumes that MAXIM will continue its operations for the foreseeable future and will be able to realize its assets and discharge its liabilities and commitments in the normal course of business.

MAXIM has a revolving Canadian facility with the Bank of Montreal to a maximum of $40,000 that has a borrowing limit based on net book value of certain Canadian property, plant and equipment plus accounts receivable balances. The borrowing limit as at March 31, 2015 was $35,785. As of that date, $nil was drawn in borrowings and $11,869 was drawn as letters of credit on this facility (note 8).

As at March 31, 2015, MAXIM breached the following financial covenants in relation to its Canadian bank facilities: debt service coverage ratio, interest coverage ratio and net funded debt to earnings before interest, tax, depreciation and amortization (“EBITDA”) ratio. Management obtained a waiver for these March 31, 2015 covenant breaches from the bank on May 5, 2015 (note 8).

Current Alberta power forward price curves suggest low Alberta power prices in the near term and under these low prices, the Corporation would likely continue to breach the following financial covenants during the remainder of 2015: debt service coverage ratio, interest coverage ratio and net funded debt to EBITDA ratio. In the absence of obtaining a waiver for the future periods if any covenant is not met, these facilities may become due on demand. As a result, significant doubt may exist with respect to the ability of the Corporation to continue as a going concern.

MAXIM is currently in the process of pursuing various asset sales including the finalization of a smaller asset sale (note 17). The proceeds from these may in part be used to cash collateralize existing letters of credit under the Canadian credit facility and repay any draws on the revolver occurring in 2015, thereby mitigating the risk of covenant default and decreasing the Corporation’s debt service charges. Management continues to actively pursue various other smaller asset sales with counterparties and financing options with current and prospective lenders which would, in management’s view, enable the Corporation to achieve its business plans. No further agreements have been reached as of the date of these financial statements and there can be no assurance that such agreements will be reached.

2. Basis of preparation and statement of compliance (continued)

(b) Statement of compliance

MAXIM prepares its annual consolidated financial statements in accordance with International Financial Reporting Standards ("IFRS") as set out in Part 1 of the Handbook of the Canadian Institute of Chartered Accountants ("CICA Handbook").

These condensed consolidated interim financial statements for the three months ended March 31, 2015, are prepared in accordance with International Accounting Standard 34 *Interim Financial Reporting* ("IAS 34"). The condensed consolidated interim financial statements do not include all the information required for annual financial statements. These interim financial statements should be read in conjunction with the Corporation's December 31, 2014 annual audited consolidated financial statements, available at www.sedar.com.

MAXIM's Board of Directors approved these condensed consolidated interim financial statements on May 5, 2015.

3. Significant accounting policies, judgments and estimates

The significant accounting policies used in the preparation of these condensed consolidated financial statements have been applied consistently for all periods presented and are unchanged from the policies disclosed in the notes to the consolidated financial statements for the year ended December 31, 2014, with the exception of the following:

On January 1, 2015, the Corporation adopted the amendments to Employee Benefits ("IAS 19"). The adoption of this amendment has no impact on the amounts recorded in the Corporation's consolidated financial statements as of January 1, 2015 or on the comparative periods.

The use of judgments and estimates in the preparation of these condensed consolidated financial statements has been applied consistently for all periods presented and are unchanged from the judgments and estimates disclosed in the notes to the consolidated financial statements for the year ended December 31, 2014, with the exception of the following:

During the first quarter of 2015, the Corporation revised its business plan for the Milner generating facility ("Milner"). This facility is now expected to remain a coal-fired facility until 2019, at which point it will be converted to a natural gas-fired facility and have a 40 year life-extension. As a result, the expected useful life of coal-fired components of the equipment has decreased and the estimated residual value of other components, not specifically related to coal-fired generation, have increased. The effect of those changes on actual and expected depreciation expense is not significant. The effect of those changes on the Statement of Financial Position have been disclosed in notes 6 and 7.

(Amounts in thousands of Canadian dollars except as otherwise noted)

4. Inventories

	March 31, 2015	December 31, 2014
Coal (a)	9,166	13,781
Fuel oil	2,513	3,737
Plant parts and stock items	5,919	5,429
Total inventories	17,598	22,947

(a) At March 31, 2015, coal inventories were written down by $4,234 to net realisable value. The write-down is included in operating expense on the statement of income.

5. Assets held for sale

During the first quarter of 2015, the Corporation entered into an agreement to sell its Emission Performance Credits. As such, these assets have been reclassified from intangible assets to assets held for sale on the statement of financial position.

Subsequent to March 31, 2015, the Corporation has closed the sale for the Emission Performance Credits (note 17).

The assets held for sale are reported at their carrying value which is less than fair value less costs to sell.

At March 31, 2015, the Canada operating segment included the following assets held for sale:

	March 31, 2015
Goodwill and other intangible assets, net	3,327
Total held for sale	3,327

6. Property, plant and equipment, net

(a) Reversal of impairment charge

In the first quarter of 2015, due to a significant change in fixed capacity rates in future periods in the ISO New England market, the Corporation reversed a previously recognized asset impairment charge of US$1,190 thousand with respect to a generating facility in the United States operating segment. The recoverable amount was determined using the value in use method using a pre-tax discount rate of 11.6%. At March 31, 2015, the recoverable amount of the generating facility was US$4,625 thousand.

(b) Change in estimate

During the first quarter of 2015, the Corporation revised the useful life of Milner. This change in estimate was due to the extension of Milner's useful life via a planned conversion to a natural gas-fired generating facility at the conclusion of its useful life as a coal-fired generating facility. As a result, there was an increase in property, plant and equipment of $2,745 primarily due to a change in the timing of the decommissioning reimbursement.

(Amounts in thousands of Canadian dollars except as otherwise noted)

7. Other assets

	March 31, 2015	December 31, 2014
Deposits and other	302	245
Long term prepaid expenses	4,291	4,128
Milner decommissioning reimbursement (a)	8,798	11,240
Total other assets	13,391	15,613

(a) During the first quarter of 2015, the Corporation revised the useful life of Milner. This change in estimate was due to the extension of Milner's useful life via a planned conversion to a natural gas-fired generating facility at the conclusion of its useful life as a coal-fired generating facility. As a result of the revision, it is anticipated that the decommissioning reimbursement will not be received in its entirety until 2059 and as such, the decrease in the reimbursement was $2,476.

8. Loans and borrowings

	March 31, 2015	December 31, 2014
French bank facilities	33,193	32,276
United States facility	24,486	22,800
Finance leases	2,179	2,443
	59,858	57,519
Less: deferred financing costs	1,173	1,163
Net loans and borrowings	58,685	56,356
Less: current portion	6,248	6,068
	52,437	50,288

(a) Canadian bank facilities

Facility A is a revolving facility to a maximum of $40,000 that has a borrowing limit based on net book value of certain Canadian property, plant and equipment plus accounts receivable balances. The borrowing limit at March 31, 2015 was $35,785. As at March 31, 2015, MAXIM had issued letters of credit of $11,869 against Facility A (December 31, 2014 - $10,860).

As at March 31, 2015, MAXIM breached the following financial covenants in relation to its Canadian bank facilities: debt service coverage ratio, interest coverage ratio and net funded debt to EBITDA ratio (note 2). The carrying amount of the loan at March 31, 2015 was $nil. Management obtained a waiver for these March 31, 2015 covenant breaches from the bank on May 5, 2015. Accordingly, the issued letters of credit of $11,869 against Facility A are unaffected by these covenant breaches as at March 31, 2015.

(Amounts in thousands of Canadian dollars except as otherwise noted)

8. Loans and borrowings (continued)

On May 5, 2015, the Corporation entered into an amended and restated credit agreement that provides a $40,000 revolving credit facility in two tranches (note 17). Under the first tranche, MAXIM can borrow up to $25,000 subject to the book value of the Corporation's Canadian accounts receivable balance and property, plant and equipment. Under the second tranche, MAXIM can borrow up to $15,000, under the same terms of the first tranche, and subject to twelve month trailing EBITDA being equal to or greater than $15,000 and MAXIM being in compliance with all financial covenants for a minimum of two consecutive quarters. This facility matures on August 31, 2016.

(b) Repayments

The Corporation's anticipated principal repayment obligations as at March 31, 2015 on the above loans and borrowings over the next five calendar years are as follows:

2015	4,793
2016	6,381
2017	6,275
2018	5,834
2019	5,447
Thereafter	31,128
	59,858

9. Other income, net

	March 31, 2015	March 31, 2014
Penalty income and insurance proceeds (a)	526	252
Provision for terminal services shortfall payment (b)	(1,135)	-
Approved emission performance credits	1,631	1,697
Pittsfield insurance proceeds	-	209
Total other income, net	1,022	2,158

(a) This consists of performance penalties and insurance proceeds related to France service providers and legal fees for the regulatory inquiry in the United States. These payments compensate MAXIM for out-of-pocket costs and lost revenue.

(b) This consists of amounts payable under the terms of a terminal services agreement for port capacity relating to coal exports in British Columbia (note 12).

(Amounts in thousands of Canadian dollars except as otherwise noted)

10. Finance expense, net

	March 31, 2015	March 31, 2014
Interest expense	885	844
Amortization of deferred financing costs	55	19
Accretion of provisions	44	56
Foreign exchange loss	1,932	1,337
Finance expense	2,916	2,256
Interest income	(14)	(3)
Total finance expense, net	2,902	2,253

11. Earnings per share

(a) Basic earnings per share

The calculation of basic earnings per share for the three months ended March 31, 2015 was based on the net loss attributable to common shareholders of $5,927 (March 31, 2014 – net income of $3,487), and weighted average number of common shares outstanding for the period of 54,218,758 (March 31, 2014 – 54,198,758).

(b) Diluted earnings per share

For the three months ended March 31, 2015 diluted earnings per share calculation, nil shares were added to the average number of common shares outstanding during the period for the dilutive effects of exercisable stock options because they were antidilutive. For the three months ended March 31, 2014 diluted earnings per share calculation, 124,664 shares were added to the average number of common shares outstanding during the period for the dilutive effects of exercisable stock options.

12. Commitments

(a) Canada

(i) Milner Power Limited Partnership ("MPLP") is responsible for the decommissioning and reclamation of the power station lands at Milner and the present value of these amounts have been recorded in provisions. The Balancing Pool has agreed to reimburse MPLP for the first $15,000 in decommissioning expense, the present value of which has been recorded in other assets. Should there be a material breach of environmental laws by MPLP during the period of ownership, then MPLP is required to contribute fully to the incremental costs caused by such material breach.

(ii) MPLP has entered into a long-term coal supply agreement with a supplier that expires at the end of 2015. Based on the prices in the agreement the purchase commitment remaining to December 31, 2015 is $8,156.

(iii) The Corporation has entered into a terminal services agreement for port capacity relating to coal exports in British Columbia. Service under the contract commences January 1, 2015 for a ten year term with an option to renew for an additional two years. This contract escalates with a price index and based on the current index the commitment for this contract for the remainder of 2015 is $3,908 and averages $6,464 for each of 2016 through 2024.

(iv) The Corporation has entered into various operating and maintenance ("O&M") contracts to supply services for the operation of certain Canadian facilities. These contracts expire on December 31, 2015 with commitments totaling $778.

(v) The Corporation has entered into a natural gas transportation service agreement from August 1, 2016 to July 31, 2024 for the Deerland peaking station development project (“Deerland”) whereby it is committed to reimburse out-of-pocket costs of the counterparty for the construction of the project. The maximum authorization of expenditure is $1,570 and $15 has been incurred by the counterparty as at March 31, 2015. The Corporation has an additional commitment of $798 regarding the service portion of the contract.

(b) United States

The Corporation, through its US subsidiaries, has entered into various O&M contracts for fixed monthly fees which escalate by the amount of inflation on an annual basis. These contracts expire between 2016 and 2026 with commitments totaling US$8,957 thousand.

(c) France

The Corporation has operating and maintenance service contracts with four service providers for its facilities in France. These contracts expire between 2015 and 2024 with commitments totaling EUR4,591 thousand.

13. Contingencies

(a) Contingent liabilities

The Corporation operates in a regulatory and commercial environment that exposes it to regulatory, contractual and litigation risks. As a result, the Corporation is involved in certain disputes and legal proceedings, including litigation, arbitration, and regulatory investigations. Such cases are subject to many uncertainties, and the outcomes are often difficult to predict, including the impact on operations or on the financial statements, particularly in the earlier stages of a case. In certain circumstances, to avoid the expense and distraction of legal proceedings, the Corporation may, based on a cost-benefit analysis, enter into a settlement even though denying any wrongdoing. The Corporation makes provisions for cases brought against it when, in the opinion of management after seeking legal advice, it is probable that a liability exists, and the amount can be reliably estimated.

The Federal Energy Regulatory Commission ("FERC") has continued its inquiry related to MAXIM's supply of electricity to the ISO New England ("ISO-NE") market. In the first quarter of 2014, FERC's Office of Enforcement ("OE") communicated to MAXIM its preliminary findings on this matter. OE is asserting that MAXIM received unjust gains of approximately US$23 million for which it should be required to repay amounts not already repaid (MAXIM repaid approximately US$3 million in 2010 through the ISO-NE mitigation program), and pay a civil penalty calculated based on the amount of unjust gains. In the fourth quarter of 2014, FERC issued a Notice of Alleged Violations ("Notice") concerning the OE inquiry. In the first quarter of 2015, FERC issued an Order to Show Cause ("Show Cause Order") concerning certain offers to supply electricity during July and August of 2010. The preliminary findings of the OE, the Notice and the Order do not constitute findings of FERC. In the second quarter of 2015, FERC issued an Order Assessing Civil Penalties ("Penalties Order") concerning the Show Cause Order (note 17). The Penalties Order has assessed penalties of US$5 million against MAXIM and US$50 thousand against an employee. MAXIM has filed an election with FERC that requires FERC to initiate a judicial proceeding in which a federal district court will review the facts and the law *de novo* (*Process for Assessing Civil Penalties*, 117 FERC ¶ 61,317, at P 5 (2006)). MAXIM intends to vigorously defend itself in district court and is confident it can demonstrate that the conduct set forth in the Show Cause Order did not violate FERC's anti-manipulation rule or any other rule. MAXIM and its external legal counsel stongly disagree with the preliminary findings of the OE on the other matters for which Show Cause Orders have not been issued.

In addition to the regulatory inquiry described in the preceding paragraph, the Corporation has received claims for additional costs from suppliers in France. Costs in relation to these claims and potential claims are only recognized when they become probable and based on the information presently known it is the view of the Corporation that these claims and potential claims are without merit. The actual outcome of these claims and potential claims, including the timing and amount of any cash outflow or the possibility of reimbursements, is not yet determinable.

(b) Contingent asset

The Corporation anticipates that the Alberta Utilities Commission ("AUC") proceedings relating to the Alberta Electric System Operator ("AESO") Line Loss Rule will establish compensation to MAXIM. The timing and amount of any cash inflow is not yet determinable.

(Amounts in thousands of Canadian dollars except as otherwise noted)

14. Changes in Non-Cash Working Capital

	March 31, 2015	March 31, 2014
Operations		
Trade receivables	(6,162)	(1,999)
Prepaid expenses and deposits	27	4,163
Inventories	1,770	(241)
Trade and other payables	8,496	771
Deferred revenue	890	1,018
	5,021	3,712

	March 31, 2015	March 31, 2014
Investing		
Trade and other payables	(228)	(300)
	(228)	(300)

15. Segmented Information

MAXIM is an independent power producer engaged in the development, ownership and operation of power generation facilities and the sale of electricity and heat. The Corporation operates in three reportable segments with power generation facilities located in Canada, the United States and France. The Corporation has chosen to organize the entity around geographic areas. For each of the segments, results are reviewed regularly by the Corporation's CEO to make decisions about resources to be allocated to the segment and to assess its performance. Canada – Other ceased to be a strategic segment in the third quarter of 2014 as a result of the sale of MAXIM BC. The Corporation has modified the composition of the reportable segments and restated the comparative information for these changes.

March 31, 2015	Canada	United States	France	Total	Corporate Amounts	Total Consolidated
Revenues from external customers	4,255	20,012	23,254	47,521	-	47,521
Operating income	(10,093)	3,362	3,481	(3,250)	(810)	(4,060)

.

March 31, 2014	Canada	United States	France	Total	Corporate Amounts	Total Consolidated
Revenues from external customers	15,260	25,530	28,342	69,132	-	69,132
Operating income	1,583	3,798	4,219	9,600	(1,070)	8,530

MAXIM's operations are impacted by seasonality due to its French operations. These are comprised of cogeneration facilities that annually operate only from November through March, in addition to peaking facilities that operate throughout the year. As such, revenues and operating income are higher in the France segment in the first and fourth quarters, as opposed to the second and third quarters.

(Amounts in thousands of Canadian dollars except as otherwise noted)

16. Fair Value of Financial Instruments

The fair value measurement of a financial instrument or derivative contract is included in one of three levels as follows:

- Level I: unadjusted quoted prices in active markets for identical assets or liabilities
- Level II: inputs other than quoted prices included within Level I that are observable for the asset or liability, either directly or indirectly
- Level III: inputs for the asset or liability that are not based on observable market data (unobservable inputs)

The fair value of the Corporation's risk management assets and (liabilities) and derivative coal contracts are as follows:

As at March 31, 2015

	Level I	Level II	Level III	Total
Coal purchase contract	-	-	(3,418)	(3,418)

As at December 31, 2014

	Level I	Level II	Level III	Total
Coal purchase contract	-	-	(3,719)	(3,719)

The Corporation's financial assets and financial liabilities that are not derivatives or loans and borrowings are all classified as Level I under the fair value hierarchy as they are based on unadjusted quoted prices in active markets for identical instruments.

The fair value of the loans and borrowings are classified as Level II under the fair value hierarchy as the fair values are based on observable market data. MAXIM determined the fair value of the loans and borrowings using comparable debt instruments with similar maturities. The fair value of the fixed rate loans and borrowings at March 31, 2015 was $69,732 (December 31, 2014 – $65,764). The carrying value of floating rate debt approximates fair value.

The fair value for coal contracts is classified as Level III under the fair value hierarchy as they are determined using inputs for the asset or liability that are not readily observable. Level III fair values for coal contracts have been determined using valuation techniques with inputs that are observable such as Newcastle coal futures prices and Canadian to United States dollar foreign exchange forward prices, as well as unobservable inputs such as historical margins on previous coal remarketing contracts.

(Amounts in thousands of Canadian dollars except as otherwise noted)

16. Fair Value of Financial Instruments (continued)

The key unobservable input is the historical sales price on previous coal remarketing agreements. The discount on the Newcastle coal futures price is 45.0%.

The effect of using reasonably possible alternative assumptions as inputs to valuation techniques from which the Level III coal contract derivatives fair values are determined at March 31, 2015 is estimated to be +$1,526 to -$240 (December 31, 2014 - +$1,392 to -$275). The Corporation has considered both the estimated cost incurred to exit the contract with the supplier and a -5% change of the market–based profit margin on the coal remarketing agreements as a reasonably possible alternative assumptions.

The following table summarizes the key factors impacting the Corporation's Level III fair value of derivative coal contracts during the period ended March 31, 2015:

	Level III
Derivative coal contract at December 31, 2013	(3,640)
Changes attributable to:	
Market price changes on contract during 2014 - unrealized	(1,538)
Purchase volume commitments fulfilled - unrealized	1,459
Derivative coal contract at December 31, 2014	(3,719)
Changes attributable to:	
Market price changes on contract during 2015 - unrealized	(103)
Purchase volume commitments fulfilled - unrealized	404
Derivative coal contract at March 31, 2015	(3,418)

	March 31, 2015	March 31, 2014
Additional Level III information:		
Unrealized (gain) loss included in earnings before income taxes	(301)	437

The Corporation's policy is to recognize transfers out of Level III as of the date of the event that caused the transfer, being a decrease to purchase commitment volumes under existing contracts.

17. Subsequent events

(a) On April 16, 2015, the Corporation closed the sale of the Emission Performance Credits for cash consideration of $3,374 (note 5).

(b) On May 1, 2015, FERC issued a Penalties Order concerning the Show Cause Order (note 13).

(c) On May 5, 2015, the Corporation entered into an amended and restated credit agreement for its Canadian bank facilities (note 8).

MANAGEMENT'S DISCUSSION AND ANALYSIS

The following Management's Discussion and Analysis ("MD&A") is dated May 5, 2015 and should be read in conjunction with the unaudited condensed consolidated interim financial statements of Maxim Power Corp. ("MAXIM" or the "Corporation") for the three months ended March 31, 2015. The MD&A should also be read in conjunction with the audited consolidated financial statements and MD&A for the year ended December 31, 2014. The unaudited condensed consolidated interim financial statements do not include all the information required for the annual financial statements. MAXIM prepares its unaudited condensed consolidated interim financial statements in accordance with International Accounting Standards ("IAS") 34 Interim Financial Reporting, under International Financial Reporting Standards ("IFRS"), as set out in Part 1 of the Handbook of the Canadian Institute of Chartered Accountants ("GAAP"). In this MD&A, MAXIM also reports certain non-GAAP measures. See page 19 for an explanation of non-GAAP measures.

Capitalized and abbreviated terms that are used but not otherwise defined herein are defined in the Glossary of Terms. Throughout this MD&A, dollar amounts within tables are in thousands of Canadian dollars unless otherwise noted.

TABLE OF CONTENTS

FORWARD-LOOKING INFORMATION

Certain information in this MD&A is forward-looking information ("FLI") and is subject to important risks and uncertainties. The results or events predicted in this information may differ from actual results or events. Factors which could cause actual results or events to differ materially from current expectations include the ability of the Corporation to implement its strategic initiatives, the availability and price of energy commodities, government and regulatory decisions, plant availability, competitive factors in the power industry and prevailing economic conditions in the regions that the Corporation operates. Forward-looking statements are often, but not always, identified by the use of words such as "anticipate", "plan", "estimate", "expect", "may", "project", "predict", "potential", "could", "might", "should" and other similar expressions. The Corporation believes the expectations reflected in forward-looking statements are reasonable but no assurance can be given that these expectations will prove to be correct. These forward-looking statements speak only to the date of this MD&A. The Corporation on disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise except as required pursuant to applicable securities laws.

Readers are cautioned that management's expectations, estimates, projections and assumptions used in the preparation of such information, although considered reasonable at the time of preparation, may prove to be imprecise and, as such, undue reliance should not be placed on forward-looking statements. With respect to forward-looking statements contained within this MD&A, MAXIM has made the following assumptions:

- MAXIM will continue its operations for the foreseeable future and will be able to realize its assets and discharge its liabilities and commitments in the normal course of business.

  MAXIM has a revolving Canadian credit facility with the Bank of Montreal ("BMO") to a maximum of $40.0 million that has a borrowing limit based on net book value of certain Canadian property, plant and equipment plus accounts receivable balances. The borrowing limit as at March 31, 2015 was $35.8 million. As of that date, $nil was drawn in borrowings and $11.9 million was drawn as letters of credit on this facility.

  As at March 31, 2015, MAXIM breached the following financial covenants in relation to its Canadian bank facilities: debt service coverage ratio ("DSCR"), interest coverage ratio and net funded debt to earnings before interest, tax, depreciation and amortization ("EBITDA") ratio. Management obtained a waiver for these March 31, 2015 covenant breaches from the bank on May 5, 2015.

  Current Alberta power forward price curves suggest low Alberta power prices in the near term and under these low prices, the Corporation would likely continue to breach the following financial covenants during the remainder of 2015: DSCR, interest coverage ratio and net funded debt to earnings before interest, tax, depreciation and amortization ratio. In the absence of obtaining a waiver for the future periods if any covenant is not met, these facilities may become due on demand. As a result, significant doubt may exist with respect to the ability of the Corporation to continue as a going concern.

  MAXIM is currently in the process of pursuing various asset sales including the finalization of a smaller asset sale. See page 3 for details under Highlights and Notable Events. The proceeds from these may in part be used to cash collateralize existing letters of credit under the Canadian credit facility and repay any draws on the revolver occurring in 2015, thereby mitigating the risk of covenant default and decreasing the Corporation’s debt service charges. Management continues to actively pursue various other smaller asset sales with counterparties and financing options with current and prospective lenders which would, in management’s view, enable the Corporation to achieve its business plans. No further agreements have been reached as of the date of this MD&A and there can be no assurance that such agreements will be reached.

- MAXIM’s approved capital budget is based on engineering estimates to maintain facility equipment, which is set by the equipment manufacturer. In France, MAXIM’s capital expenditures are based on the capital required in order to obtain renewal of contracts with the French electrical utility company.

- Development projects, including Summit Coal ("SUMMIT"), Milner 2 ("M2"), Milner expansion project ("M3"), Forked River Expansion, Deerland, and Buffalo Atlee, are based upon current estimates of capital cost, projected returns on investment, the duration of the regulatory approval process, and the ability to obtain the necessary financing.
- MAXIM expects that the long-run average price forecast for metallurgical coal will allow for the economically viable development of SUMMIT.
- Management estimates that cash flows from operations will not meet commitments and scheduled maintenance programs throughout the next twelve months as of the balance sheet date. Management is planning on using its existing cash on hand, revolving BMO credit facility and potentially asset sale proceeds to fund investing activities. This estimate is based upon current budgets and forecasts. Interruptions to production, higher than anticipated operating costs, lower realized power prices, unfavourable moves in interest rates and foreign exchange rates, failure of counterparties to meet their obligations, and various other factors may inhibit the Corporation from meeting its obligations.
- MAXIM estimates total capital expenditures of $29.4 million to be incurred in 2015 is subject to the ability to raise debt financing. These costs are based upon estimates and may differ from the actual costs to complete.
- In determining potential development sites, management estimates future electricity demand and power prices in these areas. The actual future demand and power prices in these areas may be different from expected.
- MAXIM anticipates all necessary provincial, state and federal regulations for environmental and climate change legislation will be met. Changes to environmental legislation and operational issues may affect the ability of MAXIM to comply with regulations.
- MAXIM anticipates that it will continue to maintain a working capital surplus over the next twelve months. This expectation is based on current Alberta and ISO New England ("ISO-NE") forecasted power prices, which have an impact on trade and other receivables. MAXIM also makes assumptions about cost of fuel and other operating costs, including plant maintenance costs based on equipment manufacturer’s specifications. If actual equipment performance differs or maintenance requirements vary, there may be an impact to trade and other payables. A material decrease in Alberta and the ISO-NE forward power prices or unplanned plant maintenance could have an adverse effect on MAXIM’s working capital surplus over the next twelve months.

OVERALL PERFORMANCE

Highlights and Notable Events

On May 5, 2015, MAXIM entered into an amended and restated credit agreement with BMO that provides a $40.0 million revolving credit facility in two tranches. Under the first tranche, MAXIM can borrow up to $25.0 million subject to the book value of the Corporation's Canadian accounts receivable balance and property, plant and equipment. Under the second tranche, MAXIM can borrow up to $15.0 million, under the same terms of the first tranche, and subject to twelve month trailing EBITDA being equal to or greater than $15.0 million and MAXIM being in compliance with all financial covenants for a minimum of two consecutive quarters. This facility matures on August 31, 2016. MAXIM will continue to use, as necessary, the revolving credit facility to support existing operations and growth initiatives.

On April 16, 2015, MAXIM closed the sale of its 2012 and 2013 Emission Performance Credits pertaining to Alberta’s Greenhouse Gas Reduction Program ("Emission Performance Credits"), for a total cash consideration of $3.4 million, resulting in a nominal gain on sale.

The Corporation, as previously reported, has been responding to the Federal Energy Regulatory Commission ("FERC") inquiry since the latter part of 2013. On February 2, 2015, FERC issued an Order to Show Cause ("Show Cause Order") concerning certain offers to supply electricity occurring during July and August of 2010. The Show Cause Order did not constitute findings of FERC. Subsequent to March 31, 2015, MAXIM and its external legal counsel formally responded to the Show Cause Order. On May 1, 2015, FERC issued an Order Assessing Civil Penalties (“Penalties Order”) concerning the Show Cause Order. The Penalties Order has assessed penalties of U.S. $5 million against MAXIM and U.S. $50 thousand against an employee. MAXIM has filed an election with FERC that requires FERC to initiate a judicial proceeding in which a federal district court will review the facts and the law *de novo* (*Process for Assessing Civil Penalties*, 117 FERC ¶ 61,317, at P 5 (2006)). MAXIM intends to vigorously defend itself in district court and is confident it can demonstrate that the conduct set forth in the Show Cause Order did not violate FERC’s anti-manipulation rule or any other rule.

On February 12, 2015, the Alberta Utilities Commission ("AUC") approved MAXIM’s application to construct and operate M3. M3 is an expansion project for the HR Milner generating facility ("M1"), comprised of an 86 MW natural gas-fired cogeneration power plant to be located adjacent to M1. M3, before giving effect to the development of M2, will increase the nameplate capacity at the Milner site from 150 MW to 236 MW.

On February 4, 2015, the ISO-NE announced the conclusion of the Forward Capacity Market auction. The amount paid to existing power system resources commencing in June 2018 will be US$9.55/kW per month for CDECCA and Pittsfield and US$11.08/kW per month for Pawtucket, which represents an increase of 198% and 245% respectively, from the current rate of US$3.209/kW per month. Based on MAXIM’s forecasted capacity, the Corporation anticipates that the locked-in capacity revenue earned in the ISO-NE market will increase from US$9.6 million for the twelve months ending May 31, 2015 to US$29.6 million for the twelve months ending May 31, 2019.

On January 22, 2015, the France government passed a decree to establish a capacity market in France as of January 1, 2017. The decree provides for the certification of capacity of generators and annual auctions by which load serving entities will procure capacity from generators. Full details of market design are still forthcoming. At the date of this MD&A the timing and impact of the final decree is not yet determinable.

On January 20, 2015, the AUC rendered its decision on Module A of Phase 2 of the Corporation’s complaint related to the Alberta Electric Systems Operator's ("AESO") Line Loss Rule for contravening the Transmission Regulations and being unjust, unreasonable, unduly preferential, arbitrarily or unjustly discriminatory and inconsistent with or in contravention of the 2003 Electric Utilities Act (AUC Decision 2014-110). The decision states that the AESO has the requisite authority to grant such relief and that monetary relief will be granted to the Corporation for the period January 1, 2006 to the date a new rule takes effect. MAXIM anticipates that these proceedings will establish compensation to MAXIM as early as the fourth quarter of 2015. As at the date of this MD&A, an estimate of this amount cannot be made.

During the first quarter of 2015, MAXIM's France operating segment concluded the program to renovate five projects that commenced in 2014. Total capital expenditures related to all five projects in the renovation program were $13.6 million (9.7 million Euro). MAXIM France secured debt financing of $11.6 million (8.3 million Euro) for the five renovation projects. The terms of the loans were favourable with leverage ranging from 80% to 91% of the project investment and fixed interest rates ranging from 3.0% to 4.5%.

Key Performance Indicators

Three months ended March 31 ($000's, unless otherwise noted)	2015	2014
Revenue	47,521	69,132
Adjusted EBITDA(1)	6,596	16,573
Adjusted net income (loss)(1)	(6,153)	3,815
Net income (loss) attributable to shareholders	(5,927)	3,487
Basic and diluted net income (loss) per share attributable to shareholders ($ per share)	(0.11)	0.06
Funds from operations(2)	4,985	15,001
Total assets	407,548	410,741
Loans and borrowings	58,685	58,963
Total generation (MWh)	238,049	338,221
Average Alberta power price - market ($ per MWh)	29.02	60.59
Average Alberta power price – Milner realized ($ per MWh)	42.38	78.93
Average U.S. power price - Northeast U.S. realized (US$ per MWh)	157.89	282.28

(1) Select financial information was derived from the unaudited condensed consolidated interim financial statements and is prepared in accordance with GAAP, except adjusted EBITDA, and adjusted net income (loss). Adjusted EBITDA is provided to assist management and investors in determining the Corporation's approximate operating cash flows attributable to shareholders before interest, income taxes, depreciation and amortization and certain other income and expenses. Adjusted net income (loss) is used to compare MAXIM's results among reporting periods without consideration of unrealized gains and losses and to evaluate MAXIM's performance attributable to shareholders. Adjusted EBITDA and adjusted net income (loss) do not have any standardized meaning prescribed by GAAP and may not be comparable to similar measures presented by other companies. Refer to the Non-GAAP measures section of this MD&A for reconciliations between non-GAAP financial measures and comparable measures calculated in accordance with GAAP.

(2) Funds from operating activities before changes in working capital ("FFO") is an Additional GAAP measure provided to assist management and investors in determining the Corporation's cash flows generated from operations before the cash impact of working capital fluctuations. Refer to the Additional GAAP measures section of this MD&A for a discussion on how MAXIM uses FFO to assess the Corporation's operations.

Financial Results

Revenue, adjusted EBITDA, adjusted net income (loss) and FFO have decreased in the first quarter of 2015 when compared to 2014. The decrease in these financial measures is primarily due to lower Alberta and Northeast US power prices in the first quarter of 2015, as well as lower generation in all three geographic segments.

RESULTS OF OPERATIONS

Summary of generation by segment:

Three months ended March 31	2015		2014	
	MWh	% of Total	MWh	% of Total
Canada	100,223	42	197,373	58
United States	55,891	24	56,371	17
France	81,935	34	84,477	25
Total MWh Generation	238,049	100	338,221	100

The above table includes the operating results of Vancouver Landfill Project until it was sold by MAXIM with a closing date of July 17, 2014. Forked River and Basin Creek are excluded as these facilities provide capacity in exchange for monthly capacity payments.

Revenue

Summary of revenue by segment:

Three months ended March 31 ($000's)	2015	2014
Canada	4,254	15,260
United States	20,013	25,530
France	23,254	28,342
Revenue	47,521	69,132

First quarter revenue earned by MAXIM decreased from $69.1 million in 2014 to $47.5 million in 2015, which is a decrease of $21.6 million or 31%. The decrease was primarily due to lower generation as a result of lower power prices realized at M1 and Northeastern U.S. from lower weather-based demand and fewer supply side disruptions in Alberta. In addition to this, lower revenues were driven by fewer dispatches of France's generation facilities that were operating in dispatch mode in the first quarter of 2015 due to lower weather-based demand.

Canada:

Revenue in the first quarter of 2015 decreased $11.0 million or 72% to $4.3 million as compared to $15.3 million in 2014, primarily due to a decrease in Alberta power pricing when compared to 2014. This decrease was largely due to lower weather-based demand and excess power capacity in in the Alberta power market in 2015 which result in lower generation hours. M1 realized an average price of $42.38 per megawatt-hour ("MWh") of generation in 2015, which represents a $36.55 per MWh or 46% decrease in comparison to $78.93 per MWh realized in 2014.

United States:

First quarter revenue in the United States decreased from $25.5 million in 2014 to $20.0 million in 2015, which is a decrease of $5.5 million or 22%. This was primarily due to lower realized price as a result of reduced weather-based demand during the first quarter of 2015. This unfavourable variance was partially offset by the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to 2014.

France:

First quarter revenue earned from France decreased from $28.3 million in 2014 to $23.3 million in 2015, which was a decrease of $5.0 million or 18%. The decrease in operating results was due to lower generation and thermal heat produced as a result of fewer dispatches of generation facilities that were operating in dispatch mode in the first quarter of 2015 due to lower weather-based demand and the depreciation of the Euro relative to the Canadian dollar during 2015 as compared to 2014.

Summary of revenue by fixed versus spot price:

Three months ended March 31 ($000's)	2015	2014
Electricity and capacity sales at fixed prices	32,267	37,155
Electricity sales at spot prices	15,254	31,977
Revenue	47,521	69,132

First quarter fixed price revenue in 2015, decreased from $37.2 million in 2014 to $32.3 million in 2015, which is a decrease of $4.9 million or 13%. The decrease is primarily due to lower generation and thermal heat produced as a result of fewer dispatches of France generation facilities that were operating in dispatch mode in the first quarter of 2015 due to lower weather based demand and the depreciation of the Euro relative to the Canadian dollar during 2015 as compared to 2014. This unfavourable variance was partially offset by the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to 2014.

First quarter electricity sales at spot prices decreased from $32.0 million in 2014 to $15.3 million in 2015, which is a decrease of $16.7 million or 52%. The decrease is primarily due to lower weather-based demand in Alberta and Northeast US which resulted in lower realized prices and generation, as well as excess power supply in the Alberta power market which suppressed Alberta pool prices in the first quarter of 2015. This unfavourable variance was partially offset by the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to 2014.

Plant Operations

Summary of plant operations expense by type and segment:

Three months ended March 31	2015			2014		
($000's)	Fuel	O&M	Total	Fuel	O&M	Total
Canada	8,112	5,151	13,263	7,246	5,997	13,243
United States	8,770	7,608	16,378	14,195	6,323	20,518
France	9,079	6,287	15,366	13,258	5,841	19,099
Total	25,961	19,046	45,007	34,699	18,161	52,860
Percent	58%	42%	100%	66%	34%	100%

First quarter total plant operating expenses during the year decreased from $52.9 million in 2014 to $45.0 million in 2015, which is a decrease of $7.9 million or 15%. The decrease in plant operating expenses was primarily driven by lower fuel costs in all segments due to lower generation volumes as well as lower per unit natural gas costs in Northeast US and France. Partially offsetting this was a $4.2 million write-down of the coal inventory in the Canada segment to its recoverable amount.

Canada:

Canada's first quarter operations and maintenance ("O&M") costs decreased $0.8 million in 2015 or 13%, from $6.0 million in 2014 to $5.2 million in 2015, primarily due to lower variable O&M costs incurred which are directly linked to lower generation volumes.

First quarter fuel costs in Canada increased $0.9 million, to $8.1 million in 2015 from $7.2 million in 2014. The increase is primarily due to a $4.2 million coal inventory write-down taken in the first quarter of 2015. Excluding this non-cash charge, fuel costs decreased $3.3 million or 46% due primarily to lower coal and natural gas consumption due to lower generation and lower natural gas prices in the first quarter of 2015.

United States:

First quarter O&M expenses in 2015 increased $1.3 million or 21% to $7.6 million in 2015 from $6.3 million in 2014. The increase is primarily due to the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to the same period in 2014, as well as increased property tax and service contract expenses.

First quarter fuel costs in the United States in 2015 decreased $5.4 million or 38%, to $8.8 million in 2015 from $14.2 million in 2014. The decrease is primarily due to lower volumes consumed in conjunction with lower generation and lower per unit fuel costs in the first quarter of 2015. Partially offsetting this is the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to the same period in 2014.

France:

First quarter O&M costs in France increased $0.5 million in 2015, or 9%, to $6.3 million in 2015 from $5.8 million in 2014. This increase is primarily due to an engine failure at one cogeneration facility, engineering and site maintenance expenses, partially offset by the depreciation of the Euro relative to the Canadian dollar in 2015 as compared to the same period in 2014. The repair costs associated with the engine failure are fully offset by insurance proceeds recognized in other income.

France fuel costs in the first quarter of 2015 were $9.1 million, which was a decrease of $4.2 million or 32%, from the $13.3 million incurred in 2014. The decrease in fuel costs was due to lower generation volumes, lower per unit fuel costs and the depreciation of the Euro relative to the Canadian dollar in 2015 as compared to the same period in 2014.

General and Administrative Expense

Three months ended March 31 ($000's)	2015	2014
Total general and administrative expense	1,003	1,636

General and administration expense in the first quarter decreased $0.6 million or 38%, from $1.6 million in 2014 to $1.0 million in 2015. This decrease is primarily due to lower costs associated with MAXIM reviewing strategic alternatives for U.S. and France operating segments and lower office administration costs.

Depreciation and Amortization Expense

Three months ended March 31 ($000's)	2015	2014
Total depreciation and amortization expense	8,394	7,827

Depreciation expense in the first quarter of 2015 increased from $7.8 million in 2014 to $8.4 million in 2015, which is an increase of $0.6 million or 8%. The increase is primarily due to a higher asset base in France and M1, as well as the appreciation of the U.S. dollar relative to the Canadian dollar, partially offset by the depreciation of the Euro relative to the Canadian dollar.

Reversal of Impairment Charge

In the first quarter of 2015, due to a significant change in fixed capacity rates in future periods in the ISO-NE market, the Corporation reversed a previously recognized asset impairment charge of US$1.2 million with respect to a generating facility in the United States operating segment. The recoverable amount was determined using the value-in-use method using a pre-tax discount rate of 11.6%. At March 31, 2015, the recoverable amount of the generating facility was US$4.6 million.

Loss (gain) on Derivative Coal Contract

Three months ended March 31 ($000's)	2015	2014
Total unrealized loss (gain) on derivative coal contract	(301)	437

MAXIM had a first quarter $0.3 million unrealized gain on the derivative coal contract, as compared to a $0.4 million unrealized loss for the same period in 2014. The unrealized gain incurred during the year is a non-cash item caused by an increase in the fair value of the derivative coal contract, which is due primarily to a decline in the balance of the contracted volumes. By the expiry of the coal supply contract on December 31, 2015, any unrealized gains or losses previously recorded will have fully reversed.

This derivative coal contract is a Level III liability under IFRS, which arose from MAXIM remarketing excess coal in 2011. The Level III fair value for the coal agreement has been determined using valuation techniques with inputs that are observable such as Newcastle coal futures prices until the end of 2015, ranging from $54.15 per tonne to $55.72 per tonne (March 31, 2014 - $74.73 per tonne to $78.15 per tonne) in U.S. dollars, and the Canadian to United States dollar foreign exchange forward prices, ranging from $1.274 to $1.277 (March 31, 2014 - $1.102 to $1.115), as well as unobservable inputs such as historical margins on previous coal remarketing agreements. This Level III liability resides in the Canada operating segment.

Other Income, Net

Three months ended March 31 ($000's)	2015	2014
Other income, net	1,022	2,158

Net other income in the first quarter of 2015 decreased from $2.2 million in 2014 to $1.0 million in 2015, which is a decrease of $1.2 million. The decrease is primarily due to expenses incurred relating to the Corporation's terminal service agreement for port capacity relating to coal exports in British Columbia in the first quarter of 2015.

Finance Expense, Net

Three months ended March 31 ($000's)	2015	2014
Interest expense	885	844
Amortization of deferred financing costs	55	19
Accretion of provisions	44	56
Foreign exchange loss	1,932	1,337
Finance expense	2,916	2,256
Interest income	(14)	(3)
Total finance expense, net	2,902	2,253

Net finance expense incurred in the first quarter increased from $2.3 million in 2014 to $2.9 million in 2015. The increase is primarily due to an increase in foreign exchange from a loss of $1.3 million in 2014 to $1.9 million in 2015, which is caused primarily by the net impact of foreign exchange rate movement for US dollars and Euros on foreign intercompany liabilities held in Canada. This foreign exchange loss is offset by a gain in other comprehensive income.

Income Tax Expense (Benefit)

Three months ended March 31 ($000's)	2015	2014
Current	621	1,725
Deferred	(1,780)	945
Total income tax expense (benefit)	(1,159)	2,670

Income tax in the first quarter decreased from an expense of $2.7 million in 2014 to a benefit of $1.2 million in 2015. The decrease is primarily a result of having a decrease in earnings before tax and a higher effective tax rate due to changes in the source of taxable income and losses among the Corporation’s legal entities.

Financial Position

The following highlights changes in the unaudited condensed consolidated interim Statement of Financial Position from December 31, 2014 to March 31, 2015.

As at ($000's)	March 31, 2015	December 31, 2014	Increase (Decrease)	Primary factors explaining change
Assets				
Cash and cash equivalents	23,435	17,142	6,293	Reduction of non-cash working capital exceeded investing outflows
Trade and other receivables	26,279	20,269	6,010	Seasonality of operations
Inventories	17,598	22,947	(5,349)	Write-down of coal inventory and coal consumption in excess of required purchases of coal
Property, plant and equipment, net	254,490	246,904	7,586	Foreign exchange translation of U.S. assets, capital expenditures (see page 12), reversal of impairment (see page 8), partially offset by depreciation
Net deferred tax assets	18,393	16,632	1,761	Net deferred income tax benefit in 2015 due to taxable losses
Net other assets	50,371	52,707	(2,336)	Extension of Milner's useful life reduces present value of decommissioning reimbursement
Liabilities & Equity				
Trade and other payables	34,871	26,437	8,434	Delayed timing of vendor billings in the France segment and seasonality of operations
Derivative coal contract	3,418	3,719	(301)	Lower coal volumes remaining for the balance of contract term
Loans and borrowings	58,685	56,356	2,329	Debt issuance in France and foreign exchange translation on U.S. debt, partially offset by scheduled debt and lease payments
Provisions for decommissioning	23,277	22,506	771	Increase due to changes in the abandonment date of the coal-fired components of the Milner facility
Equity	270,315	267,583	2,732	Foreign exchange rates on self-sustaining operations, partially offset by a net loss for the period

LIQUIDITY AND CAPITAL RESOURCES

Liquidity

MAXIM utilizes existing cash, cash flows from operations and revolving credit facilities to provide liquidity to the Corporation's operations in order to finance maintenance-of-business capital expenditures and to finance development initiatives. MAXIM plans for major maintenance initiatives and preserves cash and credit through its revolving credit facilities to finance these initiatives. In certain years, it is possible that capital requirements will exceed these sources of financing. In these situations, MAXIM will arrange for debt financing.

MAXIM has up to $40.0 million in borrowing capacity under its revolving BMO credit facility, under which the Corporation at March 31, 2015, had the ability to margin $35.8 million against the Corporation's Canadian accounts receivable balance and property, plant and equipment (see below for a change in ability to margin subsequent to March 31, 2015). This facility matures on August 31, 2016. As at March 31, 2015, this facility had an outstanding balance of $11.9 million, comprised of $11.9 million of issued letters of credit and $nil in drawn credit.

As at March 31, 2015, MAXIM breached the following financial covenants in relation to its Canadian bank facilities: DSCR, interest coverage ratio and net funded debt to earnings before interest, tax, depreciation and amortization ratio. Management obtained a waiver for these March 31, 2015 covenant breaches from the bank on May 5, 2015.

Current Alberta power forward price curves suggest low Alberta power prices in the near term and under these low prices, the Corporation would likely continue to breach the following financial covenants during the remainder of 2015: DSCR, interest coverage ratio and net funded debt to earnings before interest, tax, depreciation and amortization ratio. In the absence of obtaining a waiver for the future periods if any covenant is not met, these facilities may become due on demand. As a result, significant doubt may exist with respect to the ability of the Corporation to continue as a going concern.

MAXIM is currently in the process of pursuing various asset sales including the finalization of a smaller asset sale. See page 3 for details under Highlights and Notable Events. The proceeds from these may in part be used to cash collateralize existing letters of credit under the Canadian credit facility and repay any draws on the revolver occurring in 2015, thereby mitigating the risk of covenant default and decreasing the Corporation's debt service charges. Management continues to actively pursue other various smaller asset sales with counterparties and financing options with current and prospective lenders which would, in management's view, enable the Corporation to achieve its business plans. No further agreements have been reached as of the date of this MD&A and there can be no assurance that such agreements will be reached.

On May 5, 2015, MAXIM entered into an amended and restated credit agreement with BMO that provides a $40.0 million revolving credit facility in two tranches. Under the first tranche, MAXIM can borrow up to $25.0 million subject to the book value of the Corporation's Canadian accounts receivable balance and property, plant and equipment. Under the second tranche, MAXIM can borrow up to $15.0 million, under the same terms of the first tranche, and subject to twelve month trailing EBITDA being equal to or greater than $15.0 million and MAXIM being in compliance with all financial covenants for a minimum of two consecutive quarters. This facility matures on August 31, 2016. MAXIM will continue to use, as necessary, the revolving credit facility to support existing operations and growth initiatives.

At the date of this MD&A, the Corporation has the ability to margin $25.0 million against the Corporation's Canadian accounts receivable balance and property, plant and equipment. As at the date of this MD&A, this facility had an outstanding balance of $11.9 million, comprised of $11.9 million of issued letters of credit and $nil in drawn credit.

Cash flow summary:

Three months ended March 31 ($000's)	2015	2014
Cash on hand, unrestricted, January 1	17,142	21,362
Cash flow from operations:		
• FFO	4,985	15,001
• Changes in working capital	5,021	3,712
Cash flow from (used in) financing	324	(3,235)
Available for investments	27,472	36,840
Cash flow generated used for investing activities		
• Cash used for investing activities	(4,191)	(1,907)
Effect of foreign exchange rates on cash	154	680
Cash on hand, unrestricted, March 31	23,435	35,613
Undrawn revolving credit facility(1)	23,916	25,001
Net liquidity available, March 31	47,351	60,614

(1) As of the date of this MD&A, the undrawn revolving credit facility is $13.1 million.

FFO in the first quarter decreased from $15.0 million in 2014 to $0.8 million in 2015, which is a decrease of $14.2 million or 95%. The decrease is primarily due to lower realized power prices in Alberta and Northeast US, which resulted in lower generation, initial expenses incurred relating to the Corporation's terminal service agreement in the first quarter of 2015 and the depreciation of the Euro relative to the Canadian dollar. Partially offsetting this was the appreciation of the U.S. dollar relative to the Canadian dollar during 2015 as compared to the same period in 2014.

Fluctuations in working capital in the first quarter of 2015 represented a cash inflow of $9.3 million in 2015 compared to a cash inflow of $3.7 million in 2014. See page 13 for further discussion of working capital.

During the first quarter of 2015, MAXIM’s debt issuances exceeded financing cash outflows, resulting in a net financing inflow of $0.3 million during the quarter. MAXIM’s financing inflows included issuances of long-term debt for $2.8 million, partially offset by debt and capital lease repayments totaling $1.6 million and $0.9 million in interest payments.

During the first quarter of 2014, MAXIM’s debt and capital lease repayments exceeded financing cash inflows, resulting in a net financing outflow of $3.2 million during the year. MAXIM’s financing outflows included debt and capital lease repayments of $7.6 million and $0.2 million respectively, and $0.9 million in interest payments. Partially offsetting these outflows were the issuances of long-term debt for $5.5 million.

MAXIM’s first quarter 2015 investing activities represented a cash outflow of $4.2 million, which primarily consisted of $3.8 million in property, plant and equipment ("PP&E") purchases, $0.2 million decrease in accounts payable related to capital and an increase in non-current deposits of $0.2 million. The $3.8 million in PP&E expenditures is comprised of $0.2 million on improvements at Forked River, $0.1 million on improvements to M1, $0.3 million on improvements at CDECCA, $2.7 million on facility renovations and other improvements in France, and $0.5 million on other development initiatives as well as improvements to North American facilities.

MAXIM’s first quarter 2014 investing activities represented a cash outflow of $1.9 million, which primarily consisted of $1.7 million in PP&E purchases and $0.2 million in net changes in non-cash working capital and restricted cash. The $1.7 million in PP&E expenditures is comprised of $0.5 million on improvements to M1, $0.3 million on improvements at Pittsfield, $0.3 million on renovations to facilities in France, $0.3 million on the development of Deerland and $0.3 million on other North American facilities and development initiatives.

The following table represents the net capital of the Corporation:

As at ($000's)	March 31, 2015	December 31, 2014
Long-term debt	56,506	53,913
Capital lease obligation	2,179	2,443
Less: Unrestricted cash (net of bank indebtedness)	(23,435)	(17,142)
Net debt	35,250	39,214
Shareholders' equity	269,604	266,977
Capital	304,854	306,191
Net debt to capital	11.6%	12.8%

The Corporation uses the percent of net debt to capital to monitor leverage. The decrease in net debt to capital from December 31, 2014 to March 31, 2015 is primarily due to an increase in cash as a result of monetization of working capital balances, partially offset by new debt obtained in the first quarter of 2015. Further decreasing net debt is an increase in shareholder's equity, which is due to an increase in accumulated other comprehensive as a result of foreign exchange changes. The Corporation anticipates that net debt to capital will increase through the remainder of 2015 as non-cash working capital increases and further debt-financed renovations in France are carried out. This preceding statement represents FLI and users are cautioned that actual results may vary.

Working Capital

The Corporation's working capital surplus of $28.3 million at March 31, 2015 represents a $1.4 million increase from the working capital surplus of $26.9 million at December 31, 2014. The total increase was due to a $10.7 million increase in current assets, and an $9.3 million increase in current liabilities.

The increase in current assets is due to a reclassification of emission performance credits held for sale to current assets of $3.3 million, a $6.3 million increase in unrestricted cash, $6.0 million increase in accounts receivable primarily due to seasonality of the Corporation's operations, a $0.4 million increase in income taxes recoverable due to lower comparable earnings, partially offset by a $5.3 million decrease in inventory primarily due to coal inventory write-down and consumption at M1.

The increase in current liabilities is due to a $8.5 million increase in trade and other payables arising from delayed timing of vendor billings in the France segment and seasonality of the Corporation's operations, $0.9 in deferred revenue, $0.2 million in current portion of loans and borrowings, partially offset by $0.3 million decrease from the derivative coal contract as a result of lower coal volumes for the balance of the contract term.

MAXIM anticipates that it will continue to maintain a working capital surplus over the next twelve months. This preceding statement represents FLI and users are cautioned that actual results may vary.

Contractual Obligations

There have been no material changes to contractual obligations during the first quarter of 2015.

Contingencies

The Corporation operates in a regulatory and commercial environment that exposes it to regulatory, contractual and litigation risks. As a result, the Corporation is involved in certain disputes and legal proceedings, including litigation, arbitration, and regulatory investigations. Such cases are subject to many uncertainties, and the outcome is often difficult to predict, including the impact on operations or on the financial statements, particularly in the earlier stages of a case. In certain circumstances, to avoid the expense and distraction of legal proceedings, the Corporation may, based on a cost-benefit analysis, enter into a settlement even though denying any wrongdoing. The Corporation makes provisions for cases brought against it when, in the opinion of management after seeking legal advice, it is probable that a liability exists, and the amount can be reliably estimated.

The FERC has continued its inquiry related to MAXIM's supply of electricity to the ISO-NE market. In the first quarter of 2014, FERC's Office of Enforcement ("OE") communicated to MAXIM its preliminary findings on this matter. OE is asserting that MAXIM received unjust gains of approximately US$23 million for which it should be required to repay amounts not already repaid (MAXIM repaid approximately US$3 million in 2010 through the ISO-NE mitigation program), and pay a civil penalty calculated based on the amount of unjust gains. In the fourth quarter of 2014, FERC issued a Notice of Alleged Violations ("Notice") concerning the OE inquiry. In the first quarter of 2015, FERC issued a Show Cause Order concerning certain offers to supply electricity during July and August of 2010. The preliminary findings of the OE, the Notice and the Show Cause Order do not constitute findings of FERC. In the second quarter of 2015, FERC issued a Penalties Order concerning the Show Cause Order. The Penalties Order has assessed penalties of US$5 million against MAXIM and US$50 thousand against an employee. MAXIM has filed an election with FERC that requires FERC to initiate a judicial proceeding in which a federal district court will review the facts and the law *de novo* (*Process for Assessing Civil Penalties*, 117 FERC ¶ 61,317, at P 5 (2006)). MAXIM intends to vigorously defend itself in district court and is confident it can demonstrate that the conduct set forth in the Show Cause Order did not violate FERC's anti-manipulation rule or any other rule. MAXIM and its external legal counsel strongly disagree with the preliminary findings of the OE on the other matters for which Show Cause Orders have not been issued.

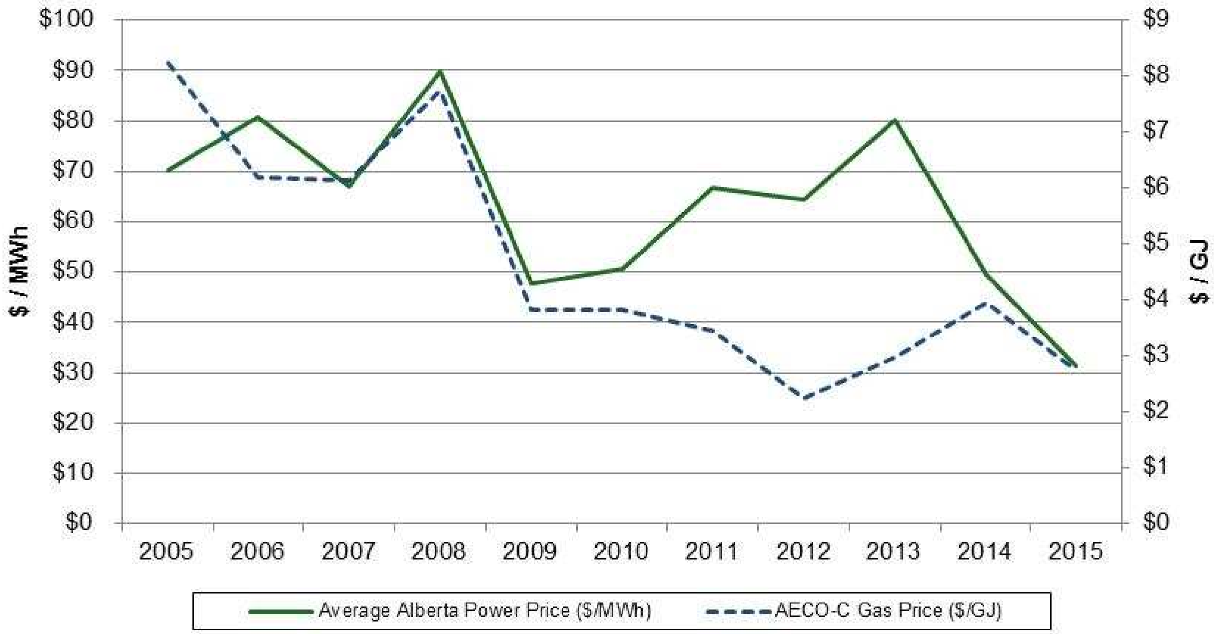
In addition to the regulatory inquiry described in the preceding paragraph, the Corporation has received claims for additional costs from suppliers in France. Costs in relation to these claims and potential claims are only recognized when they become probable and based on the information presently known it is the view of the Corporation that these claims and potential claims are without merit. The actual outcome of these claims and potential claims, including the timing and amount of any cash outflow or the possibility of reimbursements, is not yet determinable.

Capital Resources

The following represents FLI and users are cautioned that actual results may vary. The Corporation is currently estimating capital and development expenditures of approximately $29.4 million for 2015. These expenditures include $15.9 million on required facility renovations in order to obtain renewal of contracts with the French electrical utility company and $0.3 million on other sustaining capital in France, $0.6 million on plant improvements at M1, $10.3 million on plant improvements at generating facilities in Northeast U.S., $0.2 million on the development of Mine 14, $0.4 million on the development of Deerland, $0.7 million for the development of an ash management site and the development of M2 and M3, $0.8 million for the Forked River Expansion and $0.2 million on other development projects as well as capital projects at other North American facilities. Management plans to fund the France renovations with approximately 80% debt financing. Remaining expenditures will be financed through cash flows from operations and existing cash balances.

OUTLOOK

The Corporation's outlook is significantly impacted by Alberta electricity and fuel prices. Alberta electricity prices are a key revenue determinant for MAXIM's M1. Alberta power prices fluctuate based on the supply of and demand for electricity within Alberta, the cost of key inputs such as natural gas, and other market factors. The following chart compares the average annual Alberta power price to Alberta natural gas price since deregulation of the electric industry in Alberta. The break in correlation is the result of tighter generation capacity relative to demand since 2011, which led to higher power prices from 2011 to 2013. Commencing in 2014, it was noted that Alberta power prices became more closely correlated to gas prices as new supply came on the system. This trend is expected to continue for the foreseeable future.



In the Northeast U.S., growing demand for natural gas as a fuel source for electricity generation, as well as constraints on existing gas pipeline infrastructure, have increased natural gas price volatility during periods of peak gas consumption. This volatility is expected to have a positive impact on MAXIM's power plants as energy margins are positively correlated to natural gas prices, resulting in higher margins at higher gas prices. Natural gas price volatility is expected to persist until natural gas supply constraints in the region are addressed. It is also expected that capacity revenue will increase as the market becomes more constrained with capacity shortcomings due to the retirement of generating facilities that do not have natural gas as an option for its fuel source.

ACQUISITION AND DEVELOPMENT INITIATIVES

MAXIM is continuing its Independent Power Producer strategy through the advancement of its development initiatives as described herein. Supply and demand for electricity, reserve margins, tariff structures, and the regulatory environment will be key fundamental factors in determining the pace at which to pursue opportunities. Demand is highly correlated to economic growth.

Deerland

As previously reported, MAXIM received regulatory approvals to construct and operate the Deerland peaking station, a 190 MW natural gas-fired peaking facility. MAXIM has entered into agreements to secure firm natural gas transportation service for the Deerland peaking station. MAXIM expects that full-scale construction of the facility will commence pending commercial arrangements, which the Corporation is actively pursuing, and strengthening of prices in the Alberta power market.

SUMMIT

SUMMIT is MAXIM's development initiative located north of Grande Cache, Alberta that owns metallurgical coal leases for Mine 14 ("M14") and Mine 16S ("M16S"). Current estimates for M14 are 18.9 million tonnes of low-mid volatile metallurgical coal reserves with a mine life of 17 years based on the NI 43-101 Technical Report filed on SEDAR on March 21, 2013. M16S is located 30 kilometers northwest of M14 and represents 1,792 hectares or 29% of SUMMIT's total area of coal leases. A NI 43-101 Technical Report has not been prepared for M16S.

M14 is permitted for a run-of-mine production rate of up to 1,300,000 tonnes per year. MAXIM has also received approval from the Alberta Energy Regulator to construct and operate a Coal Beneficiation Plant. This Coal Beneficiation Plant, to be located on MAXIM's existing M1 industrial complex, will bifurcate M14's run-of-mine coal into an estimated annual production of 950,000 tonnes of high-quality, low-mid volatile and metallurgical coal for shipment to export markets. These approvals provide SUMMIT with all of the requisite government and regulatory approvals to construct and operate M14.

In November 2014, MAXIM received delivery of five pieces of mine equipment including two continuous miners and three shuttle cars. The units are in storage awaiting development of SUMMIT.

The Corporation expects that the long-run average price forecast for metallurgical coal will allow for the economically viable development of SUMMIT.

M2

On June 4, 2014, the AUC approved MAXIM's application to convert the fuel source for M2 from coal to natural gas and to increase the generating capacity of the proposed expansion from 500 MW to 520 MW. The M2 facility is to be located adjacent to the existing 150 MW M1. The existing infrastructure at the M1 site allows MAXIM to leverage benefits including electrical connection, fuel delivery, water licenses, and a skilled operations team.

M3

MAXIM is proposing to enhance the M1 site energy output by building M3 which will comprise of two new gas-fired turbines located next to M1. M3 will increase generating capacity at the M1 site while reducing total greenhouse gases and air emissions. Exhaust energy from M3's gas turbines will be converted to steam and utilized to generate electricity in the existing M1 steam turbine, displacing coal-sourced steam. M3, before giving effect to the development of M2, will increase the nameplate capacity at the Milner site from 150 MW to 236 MWs. Total emissions of carbon dioxide, nitrogen oxides, sulfur oxides and particulates at the M1 site will decrease compared to running the existing M1.

On February 12, 2015, MAXIM received approval from the AUC to construct and operate M3. MAXIM's construction and operation of M3 is now pending approval from Alberta Environment and Sustainable Resource Development, which is expected to be received in the second quarter of 2015.

Forked River Expansion

MAXIM continues to advance an expansion initiative at the Forked River site. Based on studies by the local utility, PJM has confirmed sufficient local infrastructure to support a potential increase of 100MW at the Forked River site. MAXIM has commenced the process of permitting of the project; configuration, size and timing are being evaluated to ensure the highest value for the expansion project. An expansion of the facility will provide additional capacity to participate in future capacity auctions and realize cost savings because this expansion project will be on the existing Forked River site.

Financing

MAXIM requires capital (debt and equity) to finance development initiatives and for larger acquisitions. MAXIM maintains the flexibility to manage the timing of its acquisition and development initiatives. MAXIM accounts for its development projects as assets under construction included in property, plant, and equipment. Capitalization of costs associated with these projects commences once technical and economic feasibility is established. If a project no longer meets these criteria, any capitalized costs for the project are expensed in the period.

ENVIRONMENTAL AND CLIMATE CHANGE LEGISLATION

M1 was commissioned in 1972, and accordingly, is allowed to operate to its full capacity to December 31, 2019 under government of Canada enacted greenhouse gas ("GHG") regulations. After December 31, 2019, M1 is allowed to operate at an annual capacity factor of up to 9% (using coal as a supply), which is approximately 113,500 MWh per annum, until December 31, 2029.

In addition to the GHG, Canadian federal and Alberta provincial environmental regulations are also being developed and/or revised for other air pollutants such as sulfur dioxide ("SO2"), nitrogen oxides ("NOx"), volatile organic carbons, and particulate matter. The Clean Air Strategic Alliance (“CASA”) is an Alberta based, multi-stakeholder group of representatives from industry, government and nongovernment organizations. This group creates strategies to assess and improve air quality for Albertans and influences air emission regulations. CASA developed a framework to manage air emissions from the electricity sector in Alberta, and the provincial government is currently reviewing GHG emissions, by each industry, in Alberta. A primary issue under review is the current misalignment of federal greenhouse gas coal regulations with the Alberta air emission regulations. The risk from this misalignment is the early retirement of coal generating plants to avoid significant uneconomic expenditures with only a few years left to operate.

Up to 2013, MAXIM was successful in generating NOx credits at M1. As of January 1, 2013, MAXIM commenced consumption of these credits to maintain compliance under CASA. Under current legislation and production profile, MAXIM does not anticipate requiring additional NOx credits and/or implementing other mitigation alternatives for the foreseeable future. M1's rate of consumption of these credits is heavily influenced by coal-fired generation and, as such, may fluctuate given changes in the levels of production and the fuel source used for production at M1.

MAXIM also has been able to generate SO2 credits at M1 up to December 31, 2012. Under current legislation, MAXIM anticipates that these credits would not be exhausted until after M1 is no longer able to operate at its full capacity while using coal as a fuel supply. Similar to the NOx credits, the consumption of these credits is driven by coal-fired generation and as such may fluctuate given changes in the levels of production and the fuel source used for production.

MAXIM continues to advocate through various industry working groups and direct discussions with the provincial regulators for a reasonable and timely resolution to what it believes is a misalignment of the federal GHG and provincial Air Pollutant regulations.

The state of environmental regulation in the U.S. remains fluid. While the U.S. Congress is not expected to enact comprehensive climate change legislation in the foreseeable future, the United States Environmental Protection Agency ("U.S. EPA") has promulgated and proposed regulations under the Clean Air Act that limit GHG emissions from certain new and expanded power plants.

Existing GHG regulations could apply to certain future modifications of MAXIM’s U.S. facilities. On June 2, 2014, the U.S. EPA proposed the first GHG regulations under existing law applicable to existing power plants. The specific GHG requirements for existing power plants will be determined by the states, which are not due to submit plans implementing U.S. EPA’s proposed limits until June 2016, a deadline which may be extended upon a state’s request. U.S. EPA’s proposed regulations of existing power plant GHG emissions have been challenged in the United States Court of Appeals and are anticipated to face additional legislative and judicial challenges in the years ahead.

MAXIM is in compliance with currently enacted environmental legislation. Such legislation includes the Climate Change and Emissions Act (Alberta) and the Regional Greenhouse Gas Initiative, which limit carbon dioxide production of facilities located in Alberta and the Northeast U.S., respectively. In the European Union, MAXIM’s France operating segment meets all current emission guidelines.

Until proposed U.S. regulations have been finalized, management does not have sufficient information to assess and quantify their future implications on the finances and competitive position of the Corporation. Management is not aware of any new legislation or environmental policies affecting current European Union regulations.

SELECTED QUARTERLY FINANCIAL INFORMATION

Key performance indicators

Quarter ended: *(unaudited) ($000's)*	31-Mar 2015	31-Dec 2014	30-Sep 2014	30-Jun 2014	31-Mar 2014	31-Dec 2013	30-Sep 2013	30-Jun 2013
Revenue	47,521	30,437	24,208	19,138	69,132	36,807	45,046	36,383

Average Northeast U.S. realized electricity price ($USD per MWh)	158	82	66	57	282	151	116	98

(1) Adjusted EBITDA is provided to assist management and investors in determining the Corporation's approximate operating cash flows attributable to shareholders before interest, income taxes, depreciation and amortization and certain other income and expenses. Adjusted net income (loss) is used to compare MAXIM's results among reporting periods without consideration of unrealized gains and losses and to evaluate MAXIM's performance attributable to shareholders. Adjusted EBITDA and adjusted net income (loss) do not have any standardized meaning prescribed by GAAP and may not be comparable to similar measures presented by other companies. Refer to the Non-GAAP measures section of this MD&A for reconciliations between non-GAAP financial measures and comparable measures calculated in accordance with GAAP.

(2) FFO is an Additional GAAP measure provided to assist management and investors in determining the Corporation's cash flows generated from operations before the cash impact of working capital fluctuations. Refer to the Additional GAAP measures section of this MD&A for a discussion on how MAXIM uses FFO to assess the Corporation's operations.

Quarter over quarter revenue and adjusted EBITDA are affected by planned and unplanned outages, market demand, market prices, timing of acquisitions and divestitures, and weather conditions. Adjusted EBITDA are also affected by seasonal Alberta power prices. Alberta power prices tend to be higher during winter and summer peak load months and are further affected by supply constraints such as outages at other Alberta generation facilities. Similarly, results in the Northeast U.S. tend to trend with weather based demand with higher earnings during the winter and summer peak periods versus non-peak periods.

In addition to the factors noted above, net income (loss) attributable to shareholders is affected by certain non-cash and non-recurring transactions as follows.

The first quarter of 2015 had a $4.2 million write-down of coal inventory, a reversal of asset impairment charge for 1.5 million relating to a US generating facility, $0.3 million unrealized gain on the derivative coal contract, and a $1.6 million gain on the approval of emission performance credits.

The first quarter of 2014 had a $0.4 million unrealized loss on the derivative coal contract, and a $1.7 million gain on the approval of emission performance credits. The second quarter of 2014 had a $0.3 million unrealized gain on the derivative coal contract and $0.5 million loss related to asset impairment charges related to the sale of MAXIM BC. The third quarter of 2014 had a $0.3 million unrealized loss on the derivative coal contract. The fourth quarter of 2014 included the recognition of impairments of $0.3 million at Gold Creek and $0.5 million for capital spares at the Northeast U.S. facilities and a $0.3 unrealized gain on the derivative coal contract.

The second quarter of 2013 had a $1.3 million unrealized gain on a firm financial commodity swap and a $0.3 million unrealized loss on the derivative coal contract. The third quarter of 2013 had a $1.1 million unrealized loss on the derivative coal contract, a $1.6 million unrealized loss on a firm financial commodity swaps, and a $0.7 million gain from sale of Hartland. The fourth quarter of 2013 had a $1.2 million unrealized gain on the derivative coal contract and a $0.2 million unrealized loss on a firm financial commodity swap.

NON-GAAP MEASURES

Management evaluates MAXIM's performance using a variety of measures. The non-GAAP measures discussed below should not be considered as an alternative to or to be more meaningful than revenue, net income attributable to shareholders of the Corporation or net cash generated from operating activities, as determined in accordance with GAAP, when assessing MAXIM's financial performance or liquidity.

These measures do not have any standardized meaning prescribed by GAAP and may not be comparable to similar measures presented by other companies.

Adjusted EBITDA

Three months ended March 31 ($000's)	2015	2014
GAAP Measures from Condensed Consolidated Statement of Income		
Net income	(5,803)	3,607
Income taxes	(1,159)	2,670
Finance expense, net	2,902	2,253
Depreciation and amortization	8,394	7,827
EBITDA	4,334	16,357
Adjustments:		
Coal inventory write-down	4,234	-
Reversal of impairment charges	(1,500)	-
Unrealized loss (gain) on derivative coal contract	(301)	437
EBITDA from non-controlling interests	(279)	(248)
Share-based compensation	108	27
Adjusted EBITDA	6,596	16,573

Adjusted EBITDA is calculated as described above, adjusted for specific items that are significant but not reflective of the Corporation's underlying operations. Adjustment of these specific items is subjective; however, management uses its judgment and informed decision-making when identifying items for adjustment.

Adjusted EBITDA is provided to assist management and investors in determining the Corporation's approximate operating cash flows attributable to shareholders before finance expense, income taxes, depreciation and amortization, and certain other income and expenses. Financing expense, income taxes, depreciation and amortization are excluded from the EBITDA calculation, as they do not represent cash expenditures that are directly affected by operations. Furthermore, EBITDA is used in MAXIM's bank covenant calculations, which requires these items to be omitted. Management believes that presentation of this non-GAAP measure provides useful information to investors and shareholders as it provides predictive value and assists in the evaluation of performance trends. Management uses adjusted EBITDA to compare financial results among reporting periods and to evaluate MAXIM's operating performance and ability to generate funds from operating activities.

In calculating adjusted EBITDA for the first quarter of 2015 management excluded certain non-cash transactions. Adjusted EBITDA excluded a coal inventory write-down at M1, the reversal of impairment charge relating to a US generating facility, an unrealized gain on the derivative coal contract, non-cash expenses related to share-based compensation and EBITDA from non-controlling interests. In 2014, adjusted EBITDA excluded an unrealized loss on the derivative coal contract, non-cash expenses related to share based compensation and EBITDA from non-controlling interest.

Adjusted Net Income (Loss)

Three months ended March 31 ($000's)	2015	2014
Net income	(5,803)	3,607
Unrealized loss (gain)	(301)	437
Tax effect of unrealized gain (loss)	75	(109)
Non-controlling interest income	(124)	(120)
Adjusted net income (loss)	(6,153)	3,815

Adjusted net income (loss) provides management and investors with information on net income excluding unrealized, non-cash items and non-controlling interests. First quarter 2015 adjusted net loss excluded a $0.3 million unrealized gain on the derivative coal contract, the tax effect of this unrealized gain, and $0.1 million non-controlling interest income. In 2014, adjusted net income excluded a $0.4 million unrealized loss on the derivative coal contract, the tax effect of this unrealized net loss, and $0.1 million non-controlling interest income.

ADDITIONAL GAAP MEASURES

Income from operations

MAXIM's consolidated statement of income includes a subtotal, income from operations, which is not required under IAS 1 - *Presentation of financial statements*. This additional GAAP measure is included in the statement of income to increase the usefulness and understandability of the Corporation's financial results.

Income from operations reflects revenues less expenses related to the operations of the Corporation. This additional GAAP measure can be used to assess the operating efficiency of the Corporation, which excludes the impact of financing and taxes as these measures are not related to the efficiency of MAXIM's operations. Management reviews income from operations on a quarterly basis as part of their assessment of adjusted EBITDA in order to monitor MAXIM's performance.

Funds from operating activities before changes in working capital

MAXIM's consolidated statement of cash flows includes a subtotal, FFO, which is not required under IAS 1 - *Presentation of financial statements*. This additional GAAP measure is included in the statement of cash flows to increase the usefulness and understandability of the Corporation's financial results. This description has been updated from the prior year in order to provide a more meaningful name to stakeholders.

FFO reflects cash generated from operations before changes in non-cash working capital. This additional GAAP measure can be used to assist management and investors in determining cash generated from operations before the impact of working capital fluctuations, which vary based upon timing differences and are not considered representative of underlying operational performance. Management reviews funds from operating activities before changes in working capital on a quarterly basis.

CRITICAL ACCOUNTING JUDGEMENTS AND ESTIMATES

The use of judgments and estimates used in the preparation of the condensed consolidated interim financial statements has been applied consistently for all periods presented and are unchanged from the judgments and estimates disclosed in the notes to the consolidated financial statements for the year ended December 31, 2014, with exception to the following:

Change in useful life

During the first quarter of 2015, the Corporation revised its business plan for M1. This facility is now expected to remain a coal-fired facility until 2019, at which point it will be converted to a natural gas-fired facility and have a 40 year life-extension. As a result, the expected useful life of coal-fired components of the equipment has decreased and the estimated residual value of other components, not specifically related to coal-fired generation, has increased. The effect of those changes on actual and expected depreciation expense is not significant. The effect of those changes on the unaudited condensed consolidated statements of financial position include an increase to property, plant and equipment of $2.7 million, a decrease to other assets of $2.5 million and an increase to provisions for decommissioning of $0.2 million.

NEW ACCOUNTING PRONOUNCEMENTS

IFRS Standards Issued Not Yet Effective

The International Accounting Standards Board ("IASB") has issued the following new standards to May 5, 2015. These standards have not been applied in preparing MAXIM's first quarter 2015 condensed consolidated interim financial statements as the effective date falls in a subsequent period.

There are no other standards that have been issued, but are not yet effective, that the Corporation anticipates will have a material effect on the consolidated financial statements once adopted.

Financial Instruments

IFRS 9, Financial Instruments, was issued in November 2009 and addresses classification and measurement of financial assets. It replaces the multiple category and measurement models in IAS 39 for debt instruments with a new mixed measurement model having only two categories: amortized cost and fair value through profit or loss. IFRS 9 also replaces the models for measuring equity instruments. Such instruments are either recognized at fair value through profit or loss or at fair value through other comprehensive income. Where equity instruments are measured at fair value through other comprehensive income, dividends are recognized in profit or loss to the extent that they do not clearly represent a return of investment; however, other gains and losses (including impairments) associated with such instruments remain in accumulated comprehensive income indefinitely.

Requirements for financial liabilities were added to IFRS 9 in October 2010, which largely carries forward existing requirements in IAS 39, Financial Instruments – Recognition and Measurement, except that fair value changes due to credit risk for liabilities designated at fair value through profit and loss are generally recorded in other comprehensive income. The Corporation is currently assessing the extent of the impact of this new standard.

In November 2013, an amendment to IFRS 9 was issued which represents a substantial overhaul of hedge accounting that will better reflect risk management activities in the financial statements. In addition the amendment will enable entities to change the accounting for liabilities that they have elected to measure at fair value, before applying any of the other requirements in IFRS 9. This change in accounting would mean that gains caused by a worsening in an entity's own credit risk on such liabilities are no longer recognized in profit or loss.

In July 2014, the IASB completed the final element of IFRS 9. The IASB has introduced a new, expected-loss impairment model that will require more timely recognition of expected credit losses. Specifically, the new Standard requires entities to account for expected credit losses from when financial instruments are first recognized and to recognize full lifetime expected losses on a more timely basis. In addition to this, the IASB has issued the mandatory effective date of the new Standard.

The new standard is effective for annual periods beginning on or after January 1, 2018. Early adoption is permitted whereby the standard must be applied retrospectively. Management is currently assessing the impact of the application of this standard, but does not anticipate that it will early adopt this new standard.

Revenue from Contracts with Customers

IFRS 15, Revenue from Contracts with Customers, was issued in May 2014 and replaces IAS 18 and IAS 11 and related Interpretations. IFRS 15 establishes a model that will apply to revenue earned from a contract with a customer, except for those covered by standards on leases, insurance contracts, financial instruments consolidated financial statements, joint arrangements, separate financial statements and investments in associates and joint ventures. The core principle of the new Standard is for companies to recognize revenue to depict the transfer of goods or services to customers in amounts that reflect the consideration to which the company expects to be entitled in exchange for those goods or services. The new Standard will also result in enhanced disclosures about revenue, provide guidance for transactions that were not previously addressed comprehensively and improve guidance for multiple-element arrangements.

The new standard is effective for annual periods beginning on or after January 1, 2017. Early adoption is permitted whereby the standard must be applied retrospectively. Management is currently assessing the impact of application of this standard, but does not anticipate that it will early adopt this new standard.

IFRS amendments

The IASB has issued the following amendments to May 5, 2015. These amendments have not been applied in preparing MAXIM's first quarter 2015 unaudited condensed consolidated interim financial statements as the effective date falls in a subsequent period.

Standard amended	Issued Date	Effective Date [(1)]	Impact on MAXIM
IFRS 10 Consolidated Financial Statements	September 2014	January 1, 2016	No significant impact
IFRS 10 Consolidated Financial Statements	December 2014	January 1, 2016	Not applicable to MAXIM
IFRS 11 Joint Arrangements	May 2014	January 1, 2016	No significant impact
IFRS 12 Disclosure of Interests in Other Entities	December 2014	January 1, 2016	Not applicable to MAXIM
IAS 1 Presentation of Financial Statements	December 2014	January 1, 2016	No significant impact
IAS 16 Property, Plant and Equipment	May 2014	January 1, 2016	No significant impact
IAS 16 Property, Plant and Equipment	June 2014	January 1, 2016	Not applicable to MAXIM
IAS 27 Separate Financial Statements	August 2014	January 1, 2016	Not applicable to MAXIM
IAS 28 Investments in Associates and Joint Ventures	September 2014	January 1, 2016	No significant impact
IAS 28 Investments in Associates and Joint Ventures	December 2014	January 1, 2016	Not applicable to MAXIM
IAS 38 Intangible Assets	May 2014	January 1, 2016	No significant impact
IAS 41 Agriculture	June 2014	January 1, 2016	Not applicable to MAXIM

(1) Effective for annual periods beginning on or after effective date

The Corporation does not anticipate that it will early adopt these amendments.

TRANSACTIONS WITH RELATED PARTIES

The Corporation did not enter any related party transactions during the first quarter of 2015, with the exception of transactions with the Corporation's Directors and members of the Executive Committee in the normal course of business. These transactions in the normal course of business are detailed in note 26 of the 2014 audited annual financial statements.

CONTROLS AND PROCEDURES

The President and Chief Executive Officer ("CEO") and the Senior Vice President, Finance and Chief Financial Officer ("CFO"), together with management have designed and maintained disclosure controls and procedures to provide reasonable assurance that: (i) material information relating to the Corporation is made known to the CEO and the CFO by others, particularly during the period in which the annual and interim filings are being prepared; and (ii) information required to be disclosed by the Corporation in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time period specified in securities legislation. Such officers have concluded that the Corporation's disclosure controls and procedures are not effective for the foregoing purposes due to the material weakness discussed below for internal control over financial reporting.

The CEO and the CFO are also responsible for designing and maintaining internal control over financial reporting, as defined under rules adopted by the Canadian Securities Administrators, within the Corporation that are designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP. MAXIM has adopted the 2013 Internal Control – Integrated Framework published by the Committee of Sponsoring Organizations ("COSO Framework") for the design of its internal control over financial reporting.

The CEO and CFO have evaluated, or caused to be evaluated under their supervision, the design and effectiveness of the Corporation's internal control over financial reporting and have identified the following material weakness in the design of the Corporation's internal control over financial reporting. The Corporation, predominately in its France segment, does not have a sufficient number of finance personnel with the required technical knowledge to address all complex accounting and tax issues that may arise and this may result in inaccuracies in financial reporting. Management mitigates this weakness by periodically utilizing outside consultants for assistance as required to the fullest extent reasonable or by developing in-house expertise or recruiting personnel with the necessary expertise; however, such mitigating procedures do not constitute a compensating control for the purposes of National Instrument 52-109 Certification of Disclosure in Issuers' Annual and Interim Filings. As a result, the Corporation's internal control over financial reporting is not effective as of March 31, 2015 The Corporation has determined that it is not cost-effective to fully remediate this weakness and, accordingly, a weakness will continue in the foreseeable future.

The Corporation is required to disclose herein any change in the Corporation's internal control over financial reporting that occurred during the period beginning January 1, 2015 and ended on March 31, 2015 that has materially affected, or is reasonably likely to materially affect, the Corporation's internal control over financial reporting. No material changes in the Corporation's internal control over financial reporting were identified during such period that have materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

OTHER INFORMATION

Outstanding share data:

Issued common shares at March 31, 2015	54,218,758
Outstanding share options at March 31, 2015	1,814,420
Total diluted common shares at March 31, 2015	**56,033,178**
No activity subsequent to March 31, 2015	1,002,395
Total diluted common shares at May 5, 2015	**57,035,573**

Additional information relating to MAXIM including the Annual Information Form is posted on SEDAR at www.sedar.com under Maxim Power Corp. and at the Corporation's website www.maximpowercorp.com.

GLOSSARY OF TERMS

The following listing includes definitions of certain terms used throughout this MD&A:

AESO	Alberta Electric System Operator
Alberta power prices	The hourly price established by the AESO for electricity bought and sold through the Alberta Power Pool
Alberta power price - Milner realized	The average price paid to Milner for sale of electricity in $/MWh
AUC	Alberta Utilities Commission
Basin Creek	Basin Creek generating station, a 55 MW generating facility located in Butte, Montana was acquired by Maxim in April, 2005
BMO	Bank of Montreal
Capacity	The rated continuous load-carrying ability, expressed in megawatts, of generation equipment (throughout the MD&A references to electric and thermal capacity are stated in nameplate capacity)
CASA	Clean Air Strategic Alliance
CEO	Chief Executive Officer
CFO	Chief Financial Officer
Coal Beneficiation Plant	A coal beneficiation plant is a facility that handles coal by washing it of impurities and prepares it for transportation to the end user or market.
Cogeneration	The combined, simultaneous generation of heat (usually in the form of hot water or steam) and power (usually in the form of electricity)
COSO Framework	2013 Internal Control – Integrated Framework published by the Committee of Sponsoring Organizations
CDECCA	CDECCA Power Plant, a 62.1 MW generating facility located in Hartford, CT was acquired by MAXIM on October 1, 2006
Emission Performance Credits	Emission performance credits are generated by facilities that have reduced emission of greenhouse gases by 12% since July 1, 2007
Deerland	Deerland is a development project for a 190 MW natural gas-fired peaking station located near Bruderheim, Alberta
DSCR	Debt service coverage ratio
EBITDA	Earnings Before Interest, Tax, Depreciation and Amortization
FERC	Federal Energy Regulatory Commission is the United States federal agency with jurisdiction over interstate electricity sales, wholesale electric rates, hydroelectric licensing, natural gas pricing and oil pipeline rates.
FFO	Funds from operation activities before changes in working capital is an Additional GAAP measure used in determining cash flows generated from operation before the impact of working capital fluctuations
FLI	Forward-looking information
Forked River	Forked River generating station, a 87 MW generating facility located in Forked River, New Jersey was acquired by MAXIM on April 17, 2008
GAAP	IFRS, as set out in Part 1 of the Handbook of the Canadian Institute of Chartered Accountants
GHG	Greenhouse gas
Gold Creek	Gold Creek generating facility, a 6.5 MW generating facility acquired by MAXIM in 2001, utilizes waste heat from a main line gas compressor to generate power
Hartland	Hartland Landfill Project, a 1.6 MW generating facility, was constructed by MAXIM in 2003, operates through a 20-year green energy agreement with B.C. Hydro

IAS	International Accounting Standards
IASB	International Accounting Standards Board
IFRS	International Financial Reporting Standards
ISO-NE	ISO New England is an independent, non-profit Regional Transmission Organization managing several states in the Northeast United States.
M1	HR Milner**,** a 150 MW (nameplate capacity) coal-fired generating facility located near the town of Grande Cache, Alberta has been in continuous operation since 1972 and was acquired by MAXIM on March 31, 2005
M14	Mine 14 is a development project of Summit Coal and is located north of Grande Cache, Alberta
M16S	Mine 16S is a development project of Summit Coal containing 1,792 hectares of coal leases and is located 30 kilometers northwest Mine 14 in the Smokey River Coalfield
M2	Milner expansion initiative to develop a 520 MW natural gas-fired generation facility
M3	Milner expansion initiative to develop a 86 MW natural gas-fired cogeneration generating facility
MAXIM or the Corporation	Maxim Power Corp.
MAXIM BC	MAXIM Power (B.C.) Inc., whose principal asset was VLF, is a wholly-owned subsidiary of MAXIM
MD&A	Management's Discussion and Analysis
MW	Megawatt, a measure of electrical generating capacity that is equivalent to one million watts
MWh	Megawatt-hour, a measure of electricity consumption equivalent to the use of 1,000,000 watts of power over a period of one hour
NOx	Nitrogen oxide
Notice	Notice of alleged violations issued by FERC
O&M	Operations and maintenance
OE	FERC's Office of Enforcement
Pawtucket	Pawtucket generating station, a 64 MW generating facility located in Pawtucket, Rhode Island began operations on November 10, 2005
Penalties Order	Order assessing civil penalties issued by FERC
Pittsfield	Pittsfield generating station, a 181 MW electric power plant in Pittsfield, Massachusetts, was acquired by MAXIM on August 6, 2008
PP&E	Property, plant and equipment
Show Cause Order	Order to show cause issued by FERC
SO2	Sulphur dioxide
SUMMIT	Summit Coal is a wholly-owned MAXIM subsidiary, which owns the Mine 14 and Mine 16S development projects
Unplanned outage	Shutdown of a generating unit due to an unanticipated breakdown
U.S. or **United States**	The United States of America
U.S. EPA	United States Environmental Protection Agency
VLF	Vancouver Landfill Project is a 7.4 MW electrical and 9.1 MW thermal landfill gas cogeneration project in Delta, BC.

Words importing the singular number, where the context requires, include the plural, and vice versa, and words importing any gender include all genders.
